

NORWE Newsletter Spring 2022

For almost two years now, we have experienced a very difficult time in terms of the overall economic situation. Massive disruptions to various supply chains, numerous force majeure announcements, the significant increase in demand in many industries, higher prices for all kinds of primary products and skyrocketing energy costs - to name just a few of the current burdens.

On one hand, we have wished for spring to be different and currently relief is not in sight – unfortunately. But on the other hand, however exactly these challenges motivate us. NORWE neither needs gas or oil at its location in Bergneustadt and the already implemented environmental measures are helping us to use the energy more efficiently.

Find out about the latest news from NORWE and our technical innovations in our newly released spring newsletter.

New logistic center in the USA

Moving into new premises in Akron, Ohio, allows NORWE Inc. to put administration and warehousing under one roof. The merge creates the best conditions for optimal order processing.

Larger storage capacities in direct connection with the service and shipping department will ensure qualified and prompt order dispatch for the customer. Therefore, it is easier to realize call-off orders for forward-looking order planning with partial deliveries.

New injection moulding machine on the way to its workplace

The first of two new injection moulding machines for the production of coilformers has already optimized the existing machinery in exchange. Greater power capacity and user-friendliness are next to the energy-efficiency and therefore at the same time environmentally friendly technical orientation the essential criteria for us.

The sustainable use of limited resources and the highly sensitive handling of CO₂ emissions, both determine our actions in order to preserve an environment worth living for future generations.

Latest series expansion of the PQ series are available

PQ components are designed to achieve the highest power output per volume and weight and are therefore ideally suited for the requirements of the electrical industry. We supply components made in high quality thermoplastics, matching your production requirements.

The series expansion with the coilformers PQ 50, PQ 65 and PQ 107, each in special design, as well as the PQ 32-30 in a double-section version with solder pins are now available.
