

EFD – Coilformers with z6 Solder-pins

The coilformers are made in gfr Polyethylene Terephthalate PET of type rtg nat. (RTI long-range temperature +155°C).
Pin material: tin bronze, tinned.
Maximum solder temperature 350°C, 2 sec.
Special materials – e.g. irradiated cross-linked – and designs on request, dimensions in mm/*inch*.

The coilformers are fitted with straight z6 pins. Binding-on of the wires is axially. The use of thin wires allows very short soldering times. The terminal strips usually feature “noses” which provide tension-relief, and “stand-offs” which allow clean soldering of the wires and of the coilformer onto the pcb.
