

Insulating Bridges

The insulating bridges are made in gfr Polyamide PA66 of type p6g (RTI long-range temperature +125°C).

For supplementary information, e.g. UL-File-No. Special materials – e.g. irradiated cross-linked – and designs on request, dimensions in mm/[inch](#).

Double section coilformers which have a compartment for a plug-in thermofuse require a bottom insulating bridge to achieve 11 mm/ [0.433 inch](#) clearance- and creepage dimensions between primary and secondary windings. The insulating bridge latches into the main shroud and can then not be removed.

When ordering please quote type and order-code.
